Chandler's Ford Parish Council Wildflower Beds 2026 Season

Following the 2025 season, we have chosen to reseed the same selection of seeds for 2026.

The Colour Boost range is a mixture to suit most situations, not only improving visual merit, but restoring critical habitats for insects, small mammal and bird populations.

Colour Boost Blush

Pale pinks through to deep reds, Blush provides a beautifully warm mix of flowers from this colour palette. Designed for great succession flowering from late spring until well into the autumn.

And then of course we include a colour boost with poppies. The epitome of remembrance and reflection, adding a flourish of vibrant colour through the spring and summer months.

We must include a disclaimer –

Plants are a living entity and are dependent upon many things. Whilst all care and attention can be given to the preparation of the soil each year, we cannot guarantee that you will spot every variety listed above. The wildflower beds are prepared, sown and then left to grow. The beds are not weeded or treated whilst they are flowering.

Equally, you might spot other varieties of plants growing thanks to the wonder of mother nature. Seed dispersal, soil seed bank, natural succession and environmental conditions all contribute to the rich tapestry of flora. So, when playing 'spot the wildflower' don't be surprised if you find something extra.
